- + Fixed known bugs

#### Description:

IObit Screen Recorder is a free, simple, and easy-to-use screen recorder with a light video editor, and it supports recording webcams.

It not only allows you to flexibly capture a full screen or any selected parts of screens and webcams but also supports recording audio from your microphone and speaker into your video simultaneously. Thus, it is ideal for recording video conferences, webinars, lectures, presentations, etc. Besides, you can add mouse click effects by highlighting the cursor and adding animation to the click action. You can also take screenshots while recording. There is no record time limitation and you can choose that don't show a watermark on your video. You can record clean videos as long as you like. When it comes to saving, you have a wide range of video formats to choose from such as MP4, AVI, FLV, MKV, MOV, TS, and GIF.

Meanwhile, IObit Screen Recorder also has a basic video editor to trim, cut, and split the captured videos. Even though it is a light screen recorder, it also adopts GPU hardware

acceleration technology to make video recording and editing more efficient and stable. Last but not least, it allows you to directly share your videos to a number of online video platforms including YouTube, Facebook, Instagram, and Twitch.

In summary, IObit Screen Recorder is an ideal screen recorder for anyone who has the need for easy and smooth screens and webcam recording, basic video editing, and convenient sharing to popular online video platforms.
