What's new:

- + New Safe Folder - Safeguard your sensitive data against unauthorized accesses and ransomware attacks
- + Redesigned UI - Bring you a more user-friendly experience with better visual effects
- + Improved Junk File Clean - Remove various software (including Microsoft Store apps) junk files to reclaim more hard disk space
- + Expanded Anti-Spyware Database - Remove more spyware for a securer system
- + Enhanced Startup Optimization - Manage more startup items to make your PC boot and run faster
- + Enhanced Software Updater - Support updating more popular software and Microsoft Store apps
- + Enlarged Surfing Protection Database - Bring you safer browsing and block more annoying ads
- + Strengthened Privacy Sweep - Sweep more privacy traces to better protect your privacy
- + Optimized AutoCare - Smarter automatic cleanup for higher PC performance
- + Updated 37 languages
- + And more can be discovered by you

Description:

Advanced SystemCare is an all-in-one yet user-friendly optimization utility designed exclusively for Windows computers. It delivers a full suite of features to clean, speed up, optimize, and protect your PC, while also safeguarding your online privacy.

Extremely Easy to Use

Advanced SystemCare features a clean, intuitive, and informative user interface. Even novice users can easily navigate and master its functions. Furthermore, its flexible, customizable settings give you complete control, allowing you to tailor the software to your specific needs without worrying about technical hurdles.

1-Click PC Cleaning

Over time, your computer accumulates large volumes of useless, temporary, or duplicate files that may slow down your PC. If you want to eliminate these unnecessary files and breathe new life into your old PC, Advanced SystemCare offers two easy and quick solutions: AI Mode cleaning and 1-Click PC Health Checker.

AI Mode cleaning adopts artificial intelligence to deliver personalized scans and repairs based on your cleaning habits and the computer's performance metrics. 1-Click PC Health Checker diagnoses your PC's overall health with a single click, then resolves the performance issues and security vulnerabilities.

If you prefer granular control, Advanced SystemCare also provides a powerful Manual Mode. This feature lets you customize cleaning and optimization tasks based on your exact requirements, such as erasing privacy traces, removing spyware and malicious residues, cleaning junk files/software leftovers/useless registry entries/invalid shortcuts, updating outdated drivers and software, boosting Internet speed, and fixing disk errors/system weaknesses/security holes.

Network and PC Speedup

Do you experience slow file downloading or video streaming? Does your computer respond slowly or even freeze frequently? If so, Advanced SystemCare is your unmissable tool to turn things around.

It offers comprehensive optimizations for your network and system, including: optimizing network and browser settings to accelerate your surfing speed; disabling unnecessary startup items to get your computer boot faster; stopping unwanted software processes, scheduled tasks, and background services to make your PC run smoothly; monitoring your system and device metrics (e.g., RAM/CPU/disk usage, GPU/mainboard temperature, fan speed) in real time and enabling you to terminate high-resource processes instantly; updating outdated software and device drivers to patch security vulnerabilities, prevent system freezes and hardware malfunctions.

System and Private Data Protection

In addition to cleaning and optimizing your PC, Advanced SystemCare also protects your computer system. Its Anti-spyware feature can detect and remove a wide range of threats, from widespread malware to emerging risks and hidden spyware, keeping your system secure.

Crucially, Advanced SystemCare not only protects your system, but also your private data and online activities. Privacy Protection can prevent unauthorized access to your personal files and data, erase your privacy traces, and mask your digital fingerprint to hide your real online identity and activities. Meanwhile, Browser Protection can alert you about unauthorized changes to your homepage or search engine, block intrusive ads, phishing scams, suspicious emails, and other browser-based threats, ensuring a private, ad-free, and secure browsing experience.

20+ Practical Tools

Advanced SystemCare's capabilities extend far beyond the features above. It still has 23 handy tools to meet your specific needs for PC optimization and protection. Smart RAM - monitors memory usage in real time and automatically frees up unused RAM to prevent slowdowns. Internet Booster - optimizes network settings and popular browsers' settings (Firefox, Edge, Opera) to accelerate browsing speeds. Win Fix - scans for common system issues (e.g., corrupted files and broken settings) and repairs them with one click. FaceID - uses facial recognition to detect unauthorized access to your PC and sends you real-time alerts. Large File Finder - locates oversized files that waste valuable disk space, allowing you to delete unnecessary ones with ease. DNS Protector - shields your system's DNS settings from modification by malware, preventing redirects to malicious websites.

In Summary

Advanced SystemCare is a comprehensive yet intuitive utility that maximizes the performance of both new and old PCs. It also serves as a powerful and reliable guardian, protecting your system from threats and safeguarding your privacy from prying eyes. Advanced SystemCare is an excellent choice for anyone looking for an all-in-one PC maintenance and security solution.
