Description:

IObit Malware Fighter is a powerful all-in-one anti-malware and anti-virus software. It defends against the latest cyber threats that may often be missed by other security tools, including spyware, adware, ransomware, Trojans, keyloggers, bots, worms, hijackers, and viruses, while shielding your privacy from unauthorized accesses. Featuring the upgraded IObit Anti-ransomware Engine, the latest Bitdefender Engine, the enhanced IObit Anti-malware Engine, and the boosted intelligent protection, it scans your PC with minimal resource usage while guarding your system against these threats—even the most subtle and sneaky variants.

How does IObit Malware Fighter provide real-time and all-around protections for your browsers, privacy, and the whole system?

Triple Engine Protection

IObit Malware Fighter leverages three powerful engines—the industry-leading Bitdefender Engine, IObit Anti-malware Engine, and IObit Anti-ransomware Engine—to deliver maximum PC protection against viruses, malware, and ransomware attacks. With multi-layered malware-crushing tech and top-tier virus defense, it lets you browse the internet with complete fearlessness. Besides, it scans for suspicious startup items, services, and scheduled tasks, ensuring even the most cunning threats cannot escape.

Dual Protection for Privacy & Sensitive Data

IObit Malware Fighter offers two robust, user-friendly protections: Sensitive Data Protect (powered by the Anti-ransomware Engine) and Safe Box—to fully protect your private, sensitive data in real-time from unauthorized accesses and the latest ransomware attacks. You only need to select the file types you want to protect in Sensitive Data Protect or add files/folders to the Safe Box to lock them as private files. Then you don't have to worry about hackers targeting your private information or unauthorized third-party programs accessing it. What's more, only you can unlock the protected data in Safe Box—no one else can get in without the correct password.

Powerful Browser Protection

With IObit Malware Fighter, you can get complete browser protection—including anti-tracking, download protection, DNS protection, homepage protection, and browsing protection. The upgraded Anti-tracking better supports the latest browsers for stronger privacy safeguards, while Surfing Protection now supports the latest Google Safe Browsing to block more online threats. Furthermore, IObit Malware Fighter also provides Email Protection and Ads Removal, which work together to fully shield your browsing from malicious websites, phishing scams, cryptocurrency mining attempts, intrusive advertisements, and email-borne threats—ultimately ensuring safer and smoother surfing.

Real-time Protection - 9 Security Guards

IObit Malware Fighter also strengthens your PC security with its 9 guards. The nine guards—Network, File, Startup, Process, MBR, Camera, USB, Behavior, and Browser Password—work tirelessly to protect every corner of your PC. Notably, Browser Password Guard can protect your stored browser passwords from unauthorized accesses, while Behavior Guard uses advanced behavior analysis to spot potential dangers early and stop suspicious attacks before they strike.

Conclusion

For anyone in need of a comprehensive and cutting-edge tool to protect their browsing, privacy, and system, IObit Malware Fighter is an essential solution that delivers top-tier defense against all types of threats.
